

SATAKE

SAVCO SALES PVT. LTD.

DESTONER / GRAVITY SELECTOR :

Model No SGA10B(2)-T

DESCRIPTION

The Satake Destoner SGA separates stones and heavy impurities from grains, utilizing bulk density differences. Rigid, heavy-duty construction with thicker steel plates and a sturdy frame ensures long life.

This is the ideal machine for separating stones from grains in an efficient, trouble-free manner.

FEATURES

✓ **Stone Discharging and Resort Mechanism:**

The discharged stones from the primary sieves contain some grains. This mixed fraction is sent to the secondary sieve by a pneumatic transfer system, using a built-in fan. Stones are concentrated and discharged.

✓ **Very Low Maintenance:**

Heavy-duty construction, permanent lubrication and easy access to sieves for cleaning or replacement result in very low maintenance.

✓ **Compact Design:**

The Satake Destoner is a compact unit and requires less installation space. The vibratory drive eliminates the need for any pulleys, belts, eccentric bearings, etc. and contributes to the improved sanitation in plants.
