### Optical Sorter : Model No RGBR5000DIS

ESTD. 1942

#### DESCRIPTION

##### CHUTE TYPE OPTICAL SORTER WITH FULL-COLOR CAMERA, RGBR :

This large-scale optical sorter features advanced full-color sorting technology and is ideally suited to sorting lentil and cereals such as wheat in a plant environment.

This machine is equipped with the latest sorting systems. A full-color camera recognizes subtle differences in color, adding to food security and improving your grains' appearance.

#### FEATURES:-

##### ✓ Higher Quality Sorting

New digital image processing and automatic image adjustment functions can be adjusted for each raw material, allowing accurate sorting of many materials.

##### ✓ Higher Capacity

Wide chute provides high processing capacity. Two chute types are available: flate and grooved. Optional mounting parts are also available to optimize chute material flow.

##### ✓ Higher Yield

A new ejection arrangement separates 2 grades of reject : absolute and intermediate. Absolute defects are removed by the primary sort and only intermediate defects go to resort. This reduces resort quantity and increases good products recovery.

##### ✓ Easier to Operate

The new user interface design has individual sensitivity adjustments for specific defects. This simple sorting control makes it easy for operator to achieve maximum sorting performance with minimum training.

##### ✓ LED Lighting

LED lighting is applied for optical section to maintain good performance and also long lifetime will reduce percentage of good grain in final rejected.
